SKILLS

React, Next.js, TypeScript
Node.js, Express, PostgreSQL
Prisma, Redis, Socket.io
Docker, CI/CD, Git
RAG pipelines, LLM evaluation

LANGUAGES

Greek (native)
English (C2)

EDUCATION

BSc Applied Informatics, University of Macedonia, 2022–present

PROFILE

Final-year Applied Informatics student specialising in fullstack web development and AI integrations. I build production-ready applications end to end, covering REST APIs, PostgreSQL schemas, React frontends with real-time features, and Docker deployments.

EXPERIENCE

Web Developer Intern — E-Avenue, Thessaloniki · Mar 2026 – May 2026

Designed and built a RAG-based AI copilot for Jira that queries internal knowledge bases and ticket history to speed up issue resolution. Developed an OCR pipeline for automated extraction of data from passports and national IDs for user verification.

L1 Technical Support — CQS S.A. / NOVA, remote · Sep 2025 – Apr 2026

Network and equipment troubleshooting for NOVA customers. Managed tickets through a CRM and diagnostic tools.

PROJECTS

TaskFlow — fullstack task management SaaS. Built a production-ready Kanban application with a REST API, JWT authentication with refresh tokens, drag-and-drop boards and real-time collaboration over WebSockets. Deployed with Docker and CI/CD to Vercel, Render, Neon Postgres and Upstash Redis.

Undergraduate thesis — developing and benchmarking RAG pipelines for LLM performance evaluation, using Python.
